

QURii

CONTROLLED ENTERPRISE INTELLIGENCE

HUMAN MISSION INTELLIGENCE

Keep expertise in the work.

Give your people the context to move the business forward.

**The answer exists somewhere. Help your
people find it and put it to work.**

QURii is designed to connect approved knowledge and workflows across existing systems, with people directing the decisions.

One question. The context to act.

A recurring equipment fault reaches a maintenance lead. The procedure is in one system, service history in another, and the last resolution sits in a prior review.

ILLUSTRATIVE WORKFLOW / MAINTENANCE REVIEW

01 Find the approved context

Retrieve relevant procedures, service records and prior decisions from the sources the user is authorized to access.

02 Prepare a recommendation

Assemble a review brief with source references, a proposed next step and any missing or conflicting information.

03 Put judgment with the reviewer

The authorized lead checks the evidence, requests more information or approves the next step under the agreed process.

04 Carry the decision into the work

Route the approved task through the configured workflow and retain the sources, decision and exceptions for the next handoff.

Measure preparation time, repeat investigation and completeness of the review record. The same pattern can support logistics exceptions and document-heavy business reviews.

Illustrative pilot scenario, not a reported deployment. Sources, integrations and controls are validated for each engagement.

Move the work forward. Keep people in control.

QURii is designed to connect knowledge, AI reasoning, approvals and work across existing systems. Its role is to carry context from a question through a controlled workflow to an accountable next step.

01 Connect the context

Bring relevant records and approved knowledge together across the systems in scope.

02 Prepare the next step

Support synthesis, drafting and routing within a defined business workflow.

03 Keep authority explicit

Identify who can review, approve, escalate and authorize consequential actions.

04 Retain the evidence

Make sources, recommendations, decisions and exceptions part of the review record.

SEE THE APPROACH. THEN TEST YOUR FIT.

QURii's solution video has been assessed Awardable through the DoD CDAO Tradewinds Solutions Marketplace.

The designation applies to the evaluated solution video; it is not a commercial deployment certification.

Watch: Data into Decisions | qurii.ai

QURii IP is licensed under COREONYX International. COREONYX Government Solutions is the exclusive government channel. Commercial inquiries begin at qurii.ai.

Designation source: coreonyx.com. Deployment and control coverage are agreed for each implementation.

Choose one workflow. Make the value visible.

Bring a recurring task that takes too long, loses context at handoffs or depends on a few experienced people.

A FOCUSED PILOT CONVERSATION

Operations + technology + the people doing the work.

WHAT YOU BRING

One process owner and a small user group. Approved sample information and a baseline of the current process. Technology and security participation to confirm access, interfaces and review rules.

WHAT THE PILOT SHOULD DELIVER

An agreed workflow and control plan. A working demonstration using the approved scope. A results assessment comparing baseline and pilot evidence, with gaps and a recommendation on the next step.

Agree scope, schedule, price and acceptance criteria before starting. Begin with a bounded workflow and expand only after reviewing the evidence.

AGREE ON SUCCESS BEFORE THE PILOT STARTS

Cycle time • Rework • Source traceability • Review quality • User confidence

BRING ONE WORKFLOW.

Find where time, context or accountability is being lost.
