

QURii

CONTROLLED ENTERPRISE INTELLIGENCE

HUMAN MISSION INTELLIGENCE

Keep the mission moving.

Give your teams the context to move critical work forward.

Behind every review is a mission waiting to move.

QURii is designed to connect approved knowledge and workflows across existing systems, with people directing the decisions.

A clearer path through the package.

An acquisition package reaches a busy team. Supporting documents, approved guidance and earlier decisions sit in different places. The reviewer needs a clear view of what is present and what needs attention.

ILLUSTRATIVE WORKFLOW / ACQUISITION PACKAGE REVIEW

01 Organize the package

Bring authorized package documents and approved reference material into a defined review scope, preserving source references.

02 Prepare the review

Prepare a cited summary, flag missing or conflicting information and organize questions for the acquisition professional.

03 Keep decisions with the professional

The authorized professional checks the sources, resolves exceptions and determines what can move forward.

04 Carry the record into the handoff

Route the reviewed work through the configured process and retain the supporting sources, decisions and outstanding actions.

Measure preparation time, rework and traceability. The same pattern can support policy review, case preparation and continuity across mission teams.

Illustrative pilot scenario, not a reported deployment. Sources, integrations and controls are validated for each engagement.

Move the work forward. Keep people in control.

QURii is designed to connect knowledge, AI reasoning, approvals and work across existing systems. Its role is to carry context from a question through a controlled workflow to an accountable next step.

01 Connect the context

Bring relevant records and approved knowledge together across the systems in scope.

02 Prepare the next step

Support synthesis, drafting and routing within a defined mission workflow.

03 Keep authority explicit

Identify who can review, approve, escalate and authorize consequential actions.

04 Retain the evidence

Make sources, recommendations, decisions and exceptions part of the review record.

SEE THE APPROACH. THEN TEST YOUR FIT.

QURii's solution video has been assessed Awardable through the DoD CDAO Tradewinds Solutions Marketplace.

The designation applies to the evaluated solution video. Viewing the marketplace entry requires a government login.

COREONYX Government Solutions is QURii's exclusive government channel. QURii IP is licensed under COREONYX International.

Designation source: coreonyx.com. Deployment and control coverage are agreed for each implementation.

Choose one workflow. Make the value visible.

Bring a recurring task that takes too long, loses context at handoffs or depends on a few experienced people.

A FOCUSED PILOT CONVERSATION

Mission owner + technology + acquisition.

WHAT YOU BRING

A mission owner and small user group.
Approved sample information and a process baseline. Technology, security and acquisition participation to establish boundaries and a practical path.

WHAT THE PILOT SHOULD DELIVER

An agreed workflow and control plan. A working demonstration using the approved scope. A results assessment comparing baseline and pilot evidence, with gaps and a recommendation on the next step.

Agree scope, schedule and acceptance criteria before starting. Measure cycle time, source traceability, rework and reviewer confidence against the baseline.
